DETAILED ACTION

Claim Rejections - 35 USC § 103

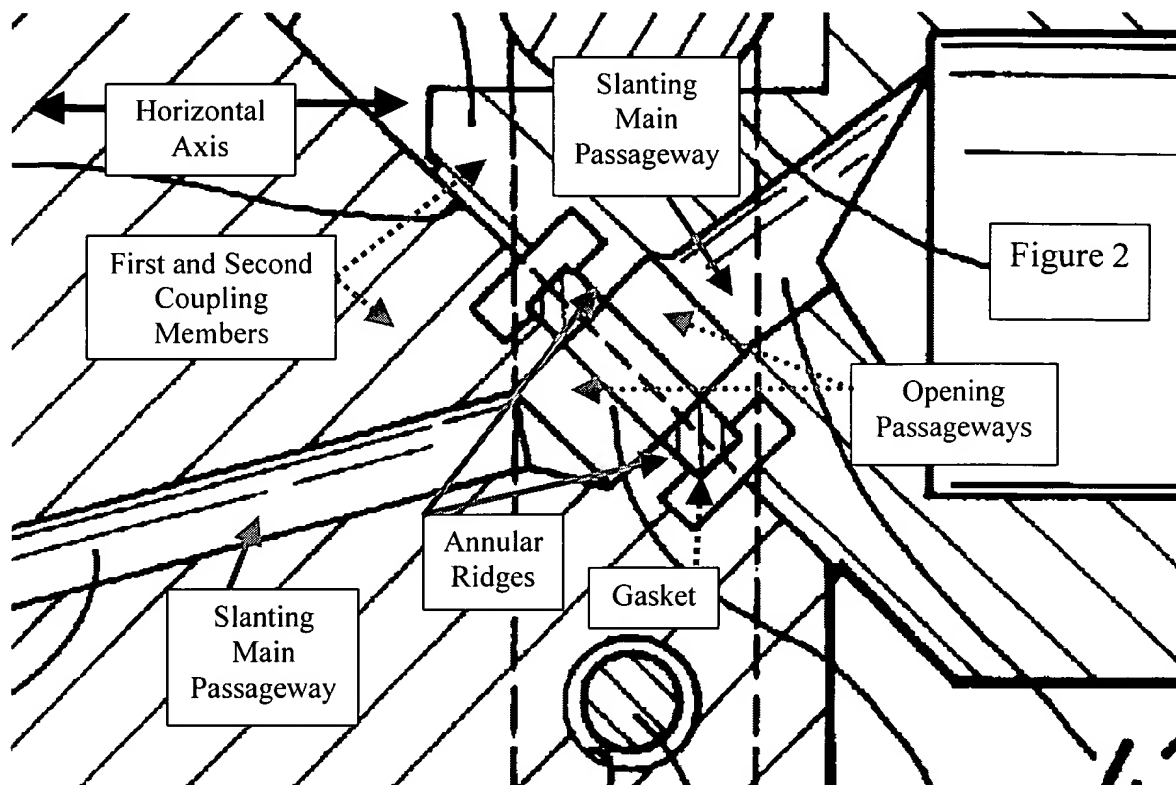

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over US patent 5967489, Nakazawa et al in view of US patent 5433454, Ramberg. In figure 2 below, Nakazawa et al discloses a fluid coupling comprising first and second coupling members having respective gasket holding annular ridges on butting end faces thereof, and an annular gasket interposed between the two coupling members, the fluid coupling being characterized in that at least has a fluid channel comprising an opening passageway orthogonal to the butting end face thereof, and a slanting main passageway (with respect to the horizontal) communicating therewith, and having a diameter smaller than the diameter of the opening passageway, and the opening

passageway having a diameter equal to the inside diameter of the annular ridge.

Nakazawa et al does not disclose the gasket having an inside diameter smaller than the diameter of the opening passageway. Ramberg teaches the gasket (20) having an inside diameter smaller than the diameter of the opening passageway (12) to provide "a highly effective, reliable sealing device" (column 2, lines 10-11). It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide a gasket having an inside diameter smaller than the diameter of the opening passageway to provide a highly effective, reliable sealing device, as taught by Ramberg.
